

OPENORDERBOOK

Open Order Book offers

regulated entities advanced blockchain trading software to power order-driven digital securities exchanges around the globe.

Fiat on-ramp & off-ramp

Trading-pairs are quoted, traded and immediately settled only against the exchanges' deposits of fiat currency in order to avoid cryptocurrency volatility.

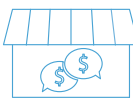

Full Transparency

Supply and demand for shares being traded are displayed on the Ethereum public blockchain.

Hack Safeguards

Traders alone hold their private key and all trades are cryptographically signed, adding increased investor protection from dangerous hacks.

Order Driven Marketplaces

Designed to look and feel like a traditional public marketplace with trades on a best bid and offer basis, not just wallet-to-wallet matching.

Cryptographically Secure Trading

All transactions are cryptographically secure with timestamped transaction records stored on the Ethereum public blockchain.

Features

Increase future liquidity potential for issuers and investors

Paired smartphone trading app to buy & sell digital securities

Reduce friction from primary issuance through secondary trading

Advanced compliance integrations

READY TO OFFER INCREASED LIQUIDITY ASSURANCE TO ISSUERS AND INVESTORS IN YOUR JURISDICTION?
